NEVEON

The Future of Foam

WE HAVE AN OPEN EAR FOR YOUR SOUND INSULATION AND ACOUSTIC REQUIREMENTS

Owing to their noise-absorbent characteristics, foams are ideal for use in a diversity of acoustic and sound-proofing areas. Our largest application fields consist of industrial noise protection, room acoustics and

impact sound insulation, as well as acoustic improvements for doors. An extensive product and technology portfolio enables us at NEVEON to create the perfect solution for every area.

FROM STANDARD APPLICATIONS TO SYSTEM SOLUTIONS

Depending upon the application, on the one hand our **akao** portfolio can offer a range of standard items, which can be supplied quickly. On the other, we are also pleased to offer the support of our cross-branch know-how for every type of project in the noise protection and acoustics fields. With you, we define the

requirements for an ideal product solution, jointly develop prototypes in close cooperation and assist with questions relating to fire safety standards. As a systems supplier we also offer you combined product developments such as metal components with mounted sound absorbers.

akao

SO THAT YOU ONLY HEAR WHAT MATTERS

Foams are always ideal partners when it comes to dealing with noise or unpleasant sounds. In this regard, our **akao** product solutions stand out due to excellent absorption values. They thus improve acoustics and contribute to a more pleasant atmosphere in offices, production halls, swimming pools and above all, homes.

AN EXTENSIVE RANGE OF MATERIALS AND MODERN TECHNOLOGIES

The demands made on acoustic and noise protection solutions vary greatly in line with the type of application. Our rubber-cork mats, which can be delivered as sheets, rolls or blanks together with installation material, are used for impact sound insulation and are simply laid on the screed or under the floor covering. In the room acoustics area, we offer our noise absorbers, which can be sub-

sequently installed in any room, come in differing forms and if requested, have individual fabrics and motifs. Our product solutions are employed for industrial noise protection. We manufacture absorption and insulation mats and also use these for the production of pressed, cut or punched components, as well as thermoformed parts.

akao ROOM ACOUSTICS

Our acoustic sails made from melamine resin foam achieve excellent absorption values and enable the creation of a pleasant room atmosphere. Acoustic absorbers are ideally suited to retrofitting in any room and are available in modern designs and various forms. We also print acoustic images using your motif.

akao INDUSTRIAL ACOUSTICS

akao product solutions are employed in ventilation systems, machinery, special and agricultural machinery, e.g. as insulation between the driver's cab and the engine compartment. For railway rolling stock we offer absorption mats in line with fire safety standards.

IMPACT SOUND INSULATION

Our rubber, cork granulate mats markedly reduce footfall and structure-borne noise under screeds and floor coverings. Their high efficiency is proven by excellent measurement values. We offer our range in standard versions and as customized solutions.

A SUSTAINABILITY PLUS

We employ environment-friendly product concepts and can refer to an extensive portfolio of recycled materials. These convince due to low VOC emissions, excellent durability and a capacity for further recycling.

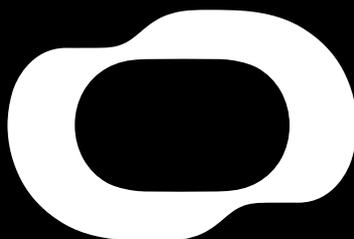

WE ARE NEVEON

We develop products that enhance the lives of people around the world. As a specialist for innovative and sustainable foam solutions we pursue fresh approaches and are passionate about future-oriented ideas.

We offer exceptional flexible and composite foams for the vast diversity of applications provided by our Living & Care, Mobility and Specialties business units.

CONTACT

We will be pleased to provide you with additional product information.

Simply get in touch!

We look forward to hearing from you.
