AUTOMOTIVE
INDUSTRY.**

NEVEON

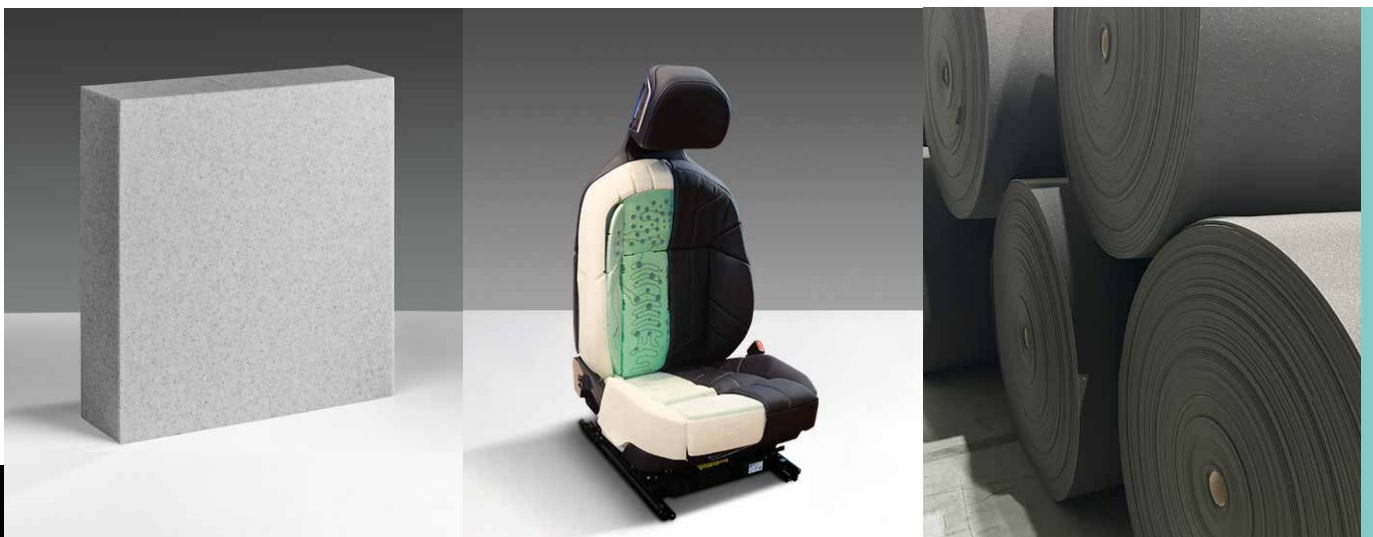

The Future of Foam

crom FOAM SOLUTIONS

SMOOTHING YOUR JOURNEY

crom foam solutions for the automotive sector make a difference – one that you can feel, see and hear. As toppers or carrier materials in car seats, they provide maximum seating comfort. Integrated into headliners, side panels, and headrests, they enable high-end, aesthetically

pleasing interior design. As lightweight foam absorbers and acoustic encapsulations, they reduce unwanted noise and create a pleasant sound environment – for a driving experience full of comfort and joy.

COMFORT MEETS FUNCTION

MOBILITY REDEFINED

Thermoformable lightweight.

Our foam.light foams are specially developed for the thermoforming process and are cut to size as sheets. They offer high compression hardness at low density – ideal for use as lightweight absorbers or acoustic encapsulations in the engine compartment or around the transmission. Their excellent acoustic and thermal properties ensure effective noise control and heat resistance right at the source.

Premium seating solutions.

Comfort that excites.

From flame- or adhesive-laminated versions to custom-configured laminates – our **crom** foam solutions are ideal carrier materials for seat covers and seat heaters, as well as precision-fitted toppers, soft cushions, and functional pads in car seats. As air-permeable components, they ensure optimal ventilation and maximum comfort. For a pleasant seating experience – on every ride.

Interior variety.

Functional design in roll format.

In the interior segment, NEVEON foams are used in roll form for headliners, side panels, headrests, armrests, and tire inlays. We rely on modern manufacturing processes to meet the highest quality standards and keep emissions as low as possible.

A VARIETY OF FOAMS PERFECTLY PROCESSED

Our broad range of ester and ether foams in various densities and properties is tailored to meet the complex requirements of the automotive industry. With decades of expertise in foam production and the use of advanced processing technologies – such as roll cutting, water-jet cutting,

thermoforming, lamination, and die-cutting – we develop solutions that meet the highest quality and performance standards and are precisely adapted to the specific needs of our customers.

RETHINKING FOAM. MAKING LIFE BETTER. IN THE AUTOMOTIVE SECTOR

As a long-standing and reliable partner to the automotive industry, we place great value on close, collaborative relationships. Our aim is to improve people's lives with high-quality foam solutions and dependable service – through safe, comfortable driving experiences for end users and efficient, trustworthy processes for our customers. Whether in seats, interiors, or the engine compartment – we track global mobility trends with foresight and continuously advance our **crom** portfolio. Together with our customers, we create solutions that move and connect.

CO₂ REDUCTION AND SUSTAINABLE MATERIALS

At NEVEON, we are committed to sustainable growth. We are constantly working to develop new circular business models and maximize the reuse of finite resources in our facilities, products, and supply chains.

Following a successful audit, NEVEON has been REDcert²-certified since 2023, making us a pioneer in the industry. By using sustainably certified renewable raw materials and sustainably certified recycled materials throughout the value chain, NEVEON is able to offer products that conserve fossil resources.

Our especially lightweight foams (density 10–15 kg/m³) also contribute to emissions reduction thanks to their low weight. At the same time, the thermal management properties of our foams in the engine compartment help reduce fuel consumption.

In addition, we use sustainable bonded foams in many automotive products, made from our own cutting scraps. This way, we combine lightweight construction, strength, acoustics, and resource efficiency into one ideal complete concept.

We are **NEVEON** and foam is our world.

As a strong partner of both trade and industry we offer foam solutions for a huge range of applications, from the comfort segment through the transportation sector to a limitless variety of specialty applications. However, irrespective of how dissimilar our products and their areas of employment are, they constantly have one common goal. They offer added value and make life more comfortable, safer and sustainable.

Or, in other words, simply better!

CONTACT

We would be happy to send you further product information.

Just get in touch!

We look forward to hearing from you.
